## It's a Pusey & Jones Dryer

We regret an error in our December issue article "Special Report on Hudson Tissue" in which the 12 ft. Yankee Dryer was erroneously identified. This dryer was supplied by the Pusey & Jones Corp. to Hudson Pulp & Paper Corp. and was removed from another of their machines. It was not a Rice Barton dryer, although, other equipment was by R-B.

## Ross Engineering Moves To Chicago Suburb

After 28 years in the same address in downtown Chicago, the J. O. Ross Engineering Corp.'s Western Division is moving into its new cream-colored brick one-story home at 320 School St., Mt. Prospect, Ill., right after New Year's Day.

The new location is 26 miles north-

west of the Chicago offices. Over the years, the Ross staff has grown so rapidly, that it was bulging at the seams of the old offices. About 50 persons will move into the new building. There will also be four representatives of affiliated John Waldron Corp., for its machinery and coupling divisions.

The Ross staff—engineers, draftsmen, purchasing, service, etc.—is under Les Janett, western regional manager.
